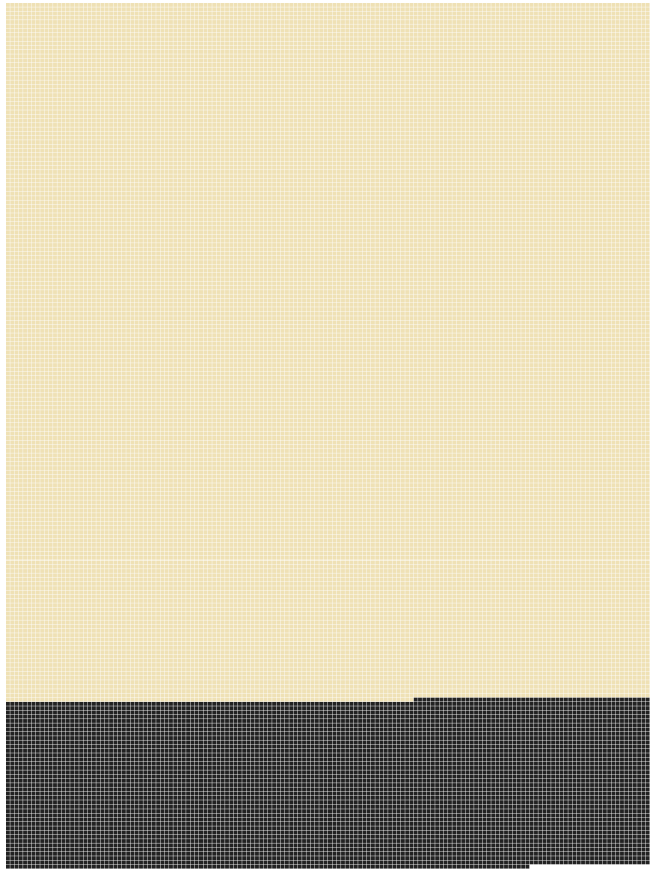
19.4% of Pacific oyster proteins are dark (no label), against 0.9% of human proteins.

Proteins: UniProt 2026_03 one-protein-per-gene sets. Dark: none of these labels the protein.
InterPro: the matches UniProt lists from InterPro 110.0
Swiss-Prot hit: MMseqs2 18.8cc5c against Swiss-Prot 2026_03, identity > 30%

One tile = one protein; 150 tiles per row and the same tile size in both maps; lit tiles first, then dark

lit: the protein has an InterPro match or a Swiss-Prot hit above 30% identity (a hit to its own entry counts)

dark: none of these

Human (Homo sapiens), 20,652 proteins
20,471 lit (99.1%), 181 dark (0.9%)


Pacific oyster (Crassostrea gigas), 30,272 proteins
24,395 lit (80.6%), 5,877 dark (19.4%)
