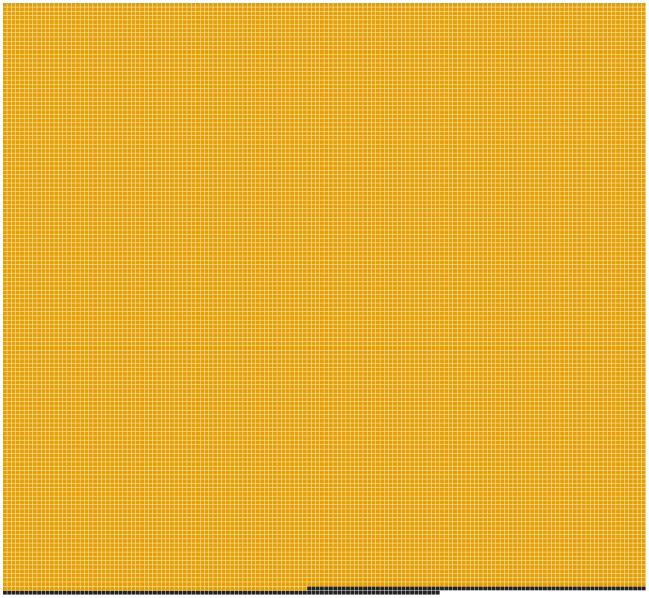
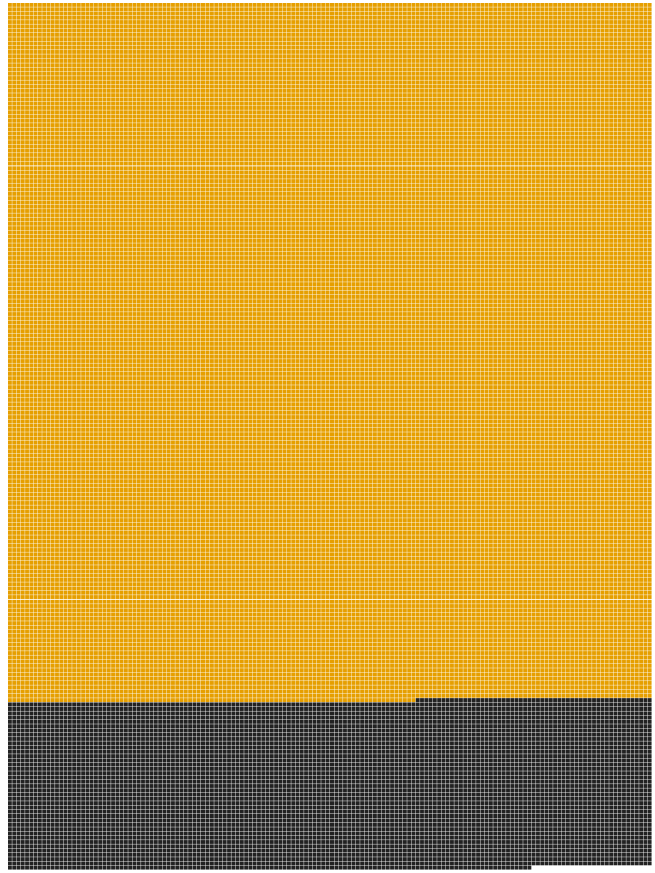
One tile = one protein; 150 tiles per row and the same tile size in both maps; lit tiles first, then dark

lit: the protein has an InterPro match or a Swiss-Prot hit above 30% identity (a hit to its own entry counts)

dark: none of these

Human (Homo sapiens), 20,652 proteins
20,471 lit (99.1%), 181 dark (0.9%)





Pacific oyster (Crassostrea gigas), 30,272 proteins
24,395 lit (80.6%), 5,877 dark (19.4%)
